

INTEGRA WINDOWS

uPVC Double Glazed Lift and Slide Doors

A uPVC lift and slide door is an innovative European design that ensures an extremely effective seal against noise and energy loss when locked and effortless movement once unlocked. Upon turning the door handle, the uPVC door lifts itself up slightly and breaks the seal so the doors can easily slide on their roller wheels. This technology significantly minimises the wear and tear of weatherproofing when compared to conventional designs, providing you with long-lasting energy efficiency.

Our uPVC lift and slide doors can be opened to a small opening and then locked and sealed in the opened position for ventilation whilst maintaining the safety of the house.

Lift and slide designs can be customised to your desired size and colour to suit the properties of any architectural style. Request a free quote for your property by contacting Integra Windows today.

Benefits of double glazed insulation

Our double glazed windows and doors are engineered to protect you and your family from Sydney's hot summers and cold winters. With energy prices soaring, there is no better time to invest in thermally efficient systems. Integra double glazed vs and doors employ the latest technology to thermally maintain and create an effective insulating layer. This ensures a comfortable and temperature-controlled indoor space year-round.

Our systems are of the highest quality and affordable. With the systems engineered in Germany, you can expect strength. The designs are European to give your home and office inspiring sophistication. All products are produced in our local Sydney manufacturing site to bring you durable products that you can trust

Lift and Slide door custom configurations

Our state of the art manufacturing facility in Sydney provides the flexibility for custom configurations to suit the individual requirements of our customers. The system is designed for large openings with 2.7m height limit and 6m width limit.

Lift and Slide Door uPVC exterior colour options

When building or renovating, selecting the colour scheme for your home's interior and exterior can be one of the most exciting decisions you make, it can also be one of the most stressful! You naturally select the colours for your roof, walls, flooring, and more, but it is very important to consider your window and door colours as these are a

long term investment that can blend with your home or become a feature in the design.

Our premium uPVC windows and doors are available in nine on trend frame colours. Apart from frame colours you may be surprised to learn that you can also choose different glass options and handles.

Lift and Slide door glass options

When choosing your doors, we always think about the style, colour and hardware to match. What we don't usually think about is the type of glass used.

There are various glass options to choose from, and all come with their own unique features and benefits.

CLEAR

FROSTED

BLACK PRIVACY

LOW-E

CLEAR

Clear is the basic glass most commonly used in windows and doors. It provides high transmission of light.

FROSTED & BLACK PRIVACY

Ensures privacy by making it harder to see through the glass. This type of glass is commonly used for bathroom windows and doors

LOW-E

Low-E, or low-emissivity, is designed to minimize the amount of infrared and ultraviolet light that comes through your glass, increasing the thermal efficiency providing a more consistent interior home environment.
