

INTEGRA WINDOWS

uPVC Tilt & Turn Double Glazed windows provide energy efficient solutions with functional flexibility.

uPVC Tilt turn windows are hinged on one side and open inward, maximising the fresh air that enters the room. They also include a central hinge so you can tilt them vertically, which allows for further ventilation and easy cleaning of the glass pane. Our uPVC frames are robust and offer a tight seal against weather, water and the risk of fire.

This together with double or triple glazed panels mean outstanding energy efficiency as well as protection against external noise, making these a popular option for high traffic areas. Your choice of timber styles or neutral colours will ensure these modern frames look attractive for decades to come.

FEATURES

- ✓ Ranges from 10 – 22mm air gap
- ✓ 4mm clear glass x 16mm air gap x 4mm clear glass is the most common configuration for our windows
- ✓ Our multipoint locking system also adds to the noise reduction quality of our uPVC windows.
- ✓ Ask about our new soft laminate coating that bounces sound away. A new innovation just released into the market.

BENEFITS

- ✓ Our products have up to 9.5 / 10 Stars on the Window Energy Rating Scheme (WERS)
- ✓ To further increase the thermal efficiency we have Low E and Argon Gas options combined with the right combination of glass so we can reach the highest levels of thermal efficiency offered in the market.
- ✓ 87% of all heat gain is through a window, 40% of all air conditioning output is lost through traditional windows.
- ✓ The only thing more thermally efficient than our doubled glazed windows is insulated double brick walls
- ✓ According to the Energy efficiency action plan (EEAP) from July 1st 2018, all new buildings must meet a higher level of thermal insulation throughout the structure.
- ✓ Ensure your new project complies with these new regulations by using Integra Windows

Tilt & Turn windows - high performance solutions

Benefits of double glazed insulation

Our double glazed windows and doors are engineered to protect you and your family from Sydney's hot summers and cold winters. With energy prices soaring, there is no better time to invest in thermally efficient systems. Integra double glazed windows and doors employ the latest technology to thermally maintain and create an effective insulating layer. This ensures a comfortable and temperature-controlled indoor space year-round.

Our systems are of the highest quality and affordable. With the systems engineered in Germany, you can expect strength. The designs are European to give your home and office inspiring sophistication. All products are produced in our local Sydney manufacturing site to bring you durable products that you can trust

Tilt & Turn window custom configurations

Our state of the art manufacturing facility in Sydney provides the flexibility for custom configurations to suit the individual requirements of our customers.

MULTIPOINT SECURITY
LOCKING SYSTEM

Integra Windows Tilt & Turn are the highest performing windows available using only the finest German fittings to ensure effortless operation and long term durability. With a high strength multipoint locking system provides the ultimate security for your family.

Tilt & Turn window uPVC exterior colour options

When building or renovating, selecting the colour scheme for your home's interior and exterior can be one of the most exciting decisions you make, it can also be one of the most stressful! You naturally select the colours for your roof, walls, flooring, and more, but it is very important to consider your window and door colours as these are a

long term investment that can blend with your home or become a feature in the design.

Our premium uPVC windows and doors are available in nine on trend frame colours. Apart from frame colours you may be surprised to learn that you can also choose different glass options and handles.

Tilt & Turn window glass options

When choosing your windows, we always think about the style, colour and hardware to match. What we don't usually think about is the type of glass used.

There are various glass options to choose from, and all come with their own unique features and benefits.

CLEAR

FROSTED

BLACK PRIVACY

LOW-E

CLEAR

Clear is the basic glass most commonly used in windows and doors. It provides high transmission of light.

WHITE & BLACK PRIVACY

Ensures privacy by making it harder to see through the glass. This type of glass is commonly used for bathroom windows

LOW-E

Low-E, or low-emissivity, is designed to minimize the amount of infrared and ultraviolet light that comes through your glass, increasing the thermal efficiency providing a more consistent interior home environment.
