

INTEGRA WINDOWS

uPVC Double Glazed Tilt & Slide Doors

The Tilt & Slide door is unique in concept and design. The construction utilises a sash which slides free of the frame on a rail system enabling a full perimeter cam locking system to be employed. This design not only enables double sealing but also incorporates a useful tilt function providing optimum ventilation whilst maintaining a barrier to children and pets. It is these distinct features that make the Tilt & Slide door the ideal alternative to a standard sliding door. Our Tilt & Slide doors can be manufactured as double or single opening.

Our uPVC Tilt & Slide Doors slide smoothly and effortlessly to one side similar to inline sliding doors. They can also be tilted open, a feature that provides extra ventilation without needing to open the doors fully.

Tilt & Slide Doors are a combination of sliding doors and the tilt and turn windows. These doors are also very secure thanks to a robust multi-locking mechanism. They provide a 5 star energy seal and are very secure. These doors are capable of a very wide opening.

Tilt & Slide Door uPVC exterior colour options

When building or renovating, selecting the colour scheme for your home's interior and exterior can be one of the most exciting decisions you make, it can also be one of the most stressful! You naturally select the colours for your roof, walls, flooring, and more, but it is very important to consider your window and door colours as these are a

long term investment that can blend with your home or become a feature in the design.

Our premium uPVC windows and doors are available in nine on trend frame colours. Apart from frame colours you may be surprised to learn that you can also choose different glass options and handles.

Tilt & Slide door glass options

When choosing your doors, we always think about the style, colour and hardware to match. What we don't usually think about is the type of glass used.

There are various glass options to choose from, and all come with their own unique features and benefits.

CLEAR

FROSTED

BLACK PRIVACY

LOW-E

CLEAR

Clear is the basic glass most commonly used in windows and doors. It provides high transmission of light.

FROSTED & BLACK PRIVACY

Ensures privacy by making it harder to see through the glass. This type of glass is commonly used for bathroom windows and doors

LOW-E

Low-E, or low-emissivity, is designed to minimize the amount of infrared and ultraviolet light that comes through your glass, increasing the thermal efficiency providing a more consistent interior home environment.
